

Simulator Systems International

Class*max* series

Compact, Low-Cost, Advanced Simulator Station

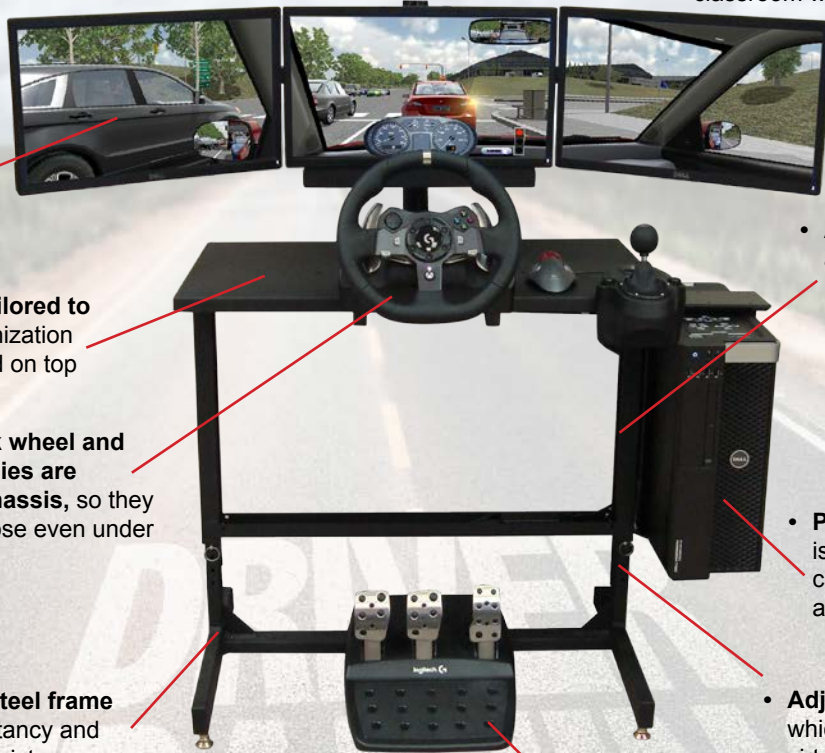

Our new ClassMax series was designed to provide cockpit like ergonomics, but in a more space saving design and at a lower cost!

Hardware:

Unlike typical desktop systems that are cluttered, mounted on standard tables that take up too much space, and allow wheel assemblies to be pulled off the table when clamps come loose, our new ClassMax chassis has been designed to eliminate each of those problems and be superior in many other ways.

- **Significant cost savings over comparable cockpit models**
- **No annual service contracts are required!** The entire system, including business class PC, can be maintained by local IT personnel, which saves even more money over the lifetime of ownership
- **Compact footprint is only 26" deep, so it takes up much less space than a typical desktop or cockpit,** which means larger simulator lab rooms are not necessary...virtually any classroom would provide plenty of space for multiple units
- **Elevated & adjustable triple monitor panel provides ideal ergonomics** and an actual behind the wheel perspective
- **All cabling is neatly bound and hidden** from view for a professional look, and to reduce cable tampering
- **Custom graphics tailored to your school or organization** prominently displayed on top
- **Force-feedback wheel and shifter assemblies are bolted to the chassis,** so they will not come loose even under strenuous use
- **Powerful and reliable PC** is mounted on elevated side caddie for added protection and easy access.
- **Powder-coated steel frame** for long life expectancy and maximum wear resistance
- **Adjustable height frame,** which accommodates virtually any driver
- **Pedal box is mounted to a steel cross-member at the base of the chassis** using special steel locking pins, so it won't slide out of position when in use

Software:

Our comprehensive software suite has been designed to cover everything from pre-drive checks, rules of the road, and scanning principles, to more complex tasks such as defensive driving techniques, how to avoid collisions, identify hazards, drive in adverse and impaired conditions and more. This suite features 39 specialized lessons with over 200 driving scenarios, and unlimited practice driving in the city, country, driving range and test track. Includes grading, tracking and archiving. Optional Computer Based Training (CBT) software can be added to your simulator or for a stand-alone pc.
